THE WHOLE PICTURE

An agentic platform, with its gaps visible

NEW: read-only dispatch + one policy promotion class

03 AGENT INFRASTRUCTURE

Harness

- Context — BUILT
- Capabilities — BUILT
- Execution — BUILT / ALPHA
- Evaluation — PARTIAL

Governance

- Non-human identity — BUILT
- Security controls — BUILT
- Agent observability — BUILT

⚠ Evaluation is not a release gate

⚠ Caller authentication missing

02 PATH DEFINITIONS

PARTIAL

- Deterministic
- Probabilistic
- Hybrid

Alert dispatch built; no path registry

01 TOOLING

BUILT

- Developer portal
- Delivery + resources
- Secrets + identity
- Edge + admission
- Data + telemetry

EVERYTHING AS CODE

BUILT

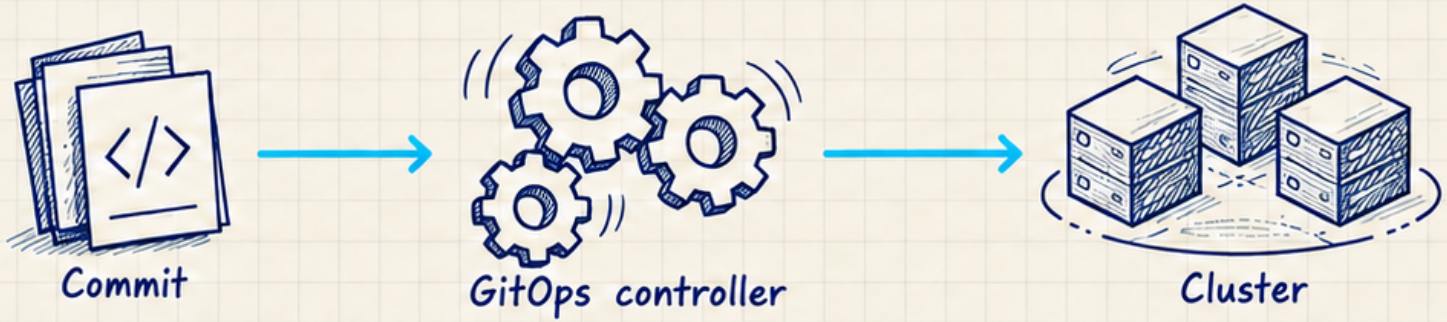
Reviewed files + shared checks

Six paths built. Implementation and remediation remain partial.

THREE WAYS WORK MOVES

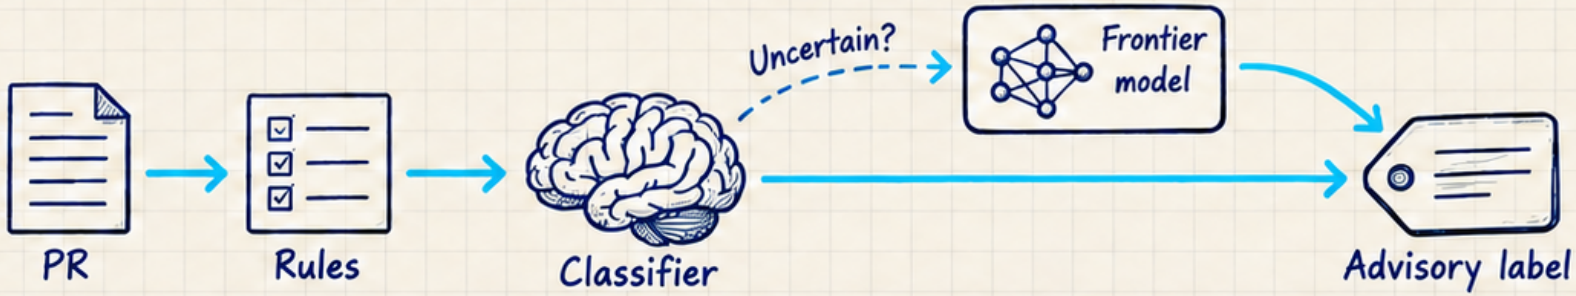
01 DETERMINISTIC • BUILT

Declared state is reconciled.



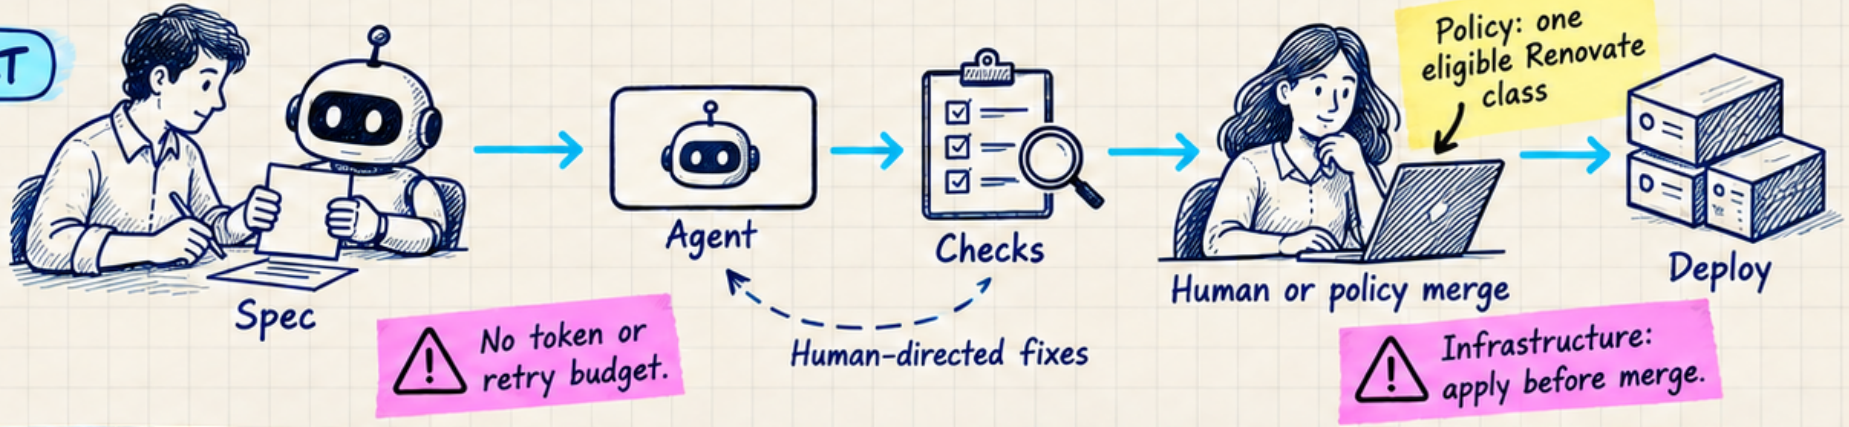
02 PROBABILISTIC • BUILT

Judgment helps route review.



03 HYBRID • BUILT

Generation proposes. Checks constrain.



Checks constrain. Humans or policy promote.

GOVERNANCE SURROUNDS THE AGENT

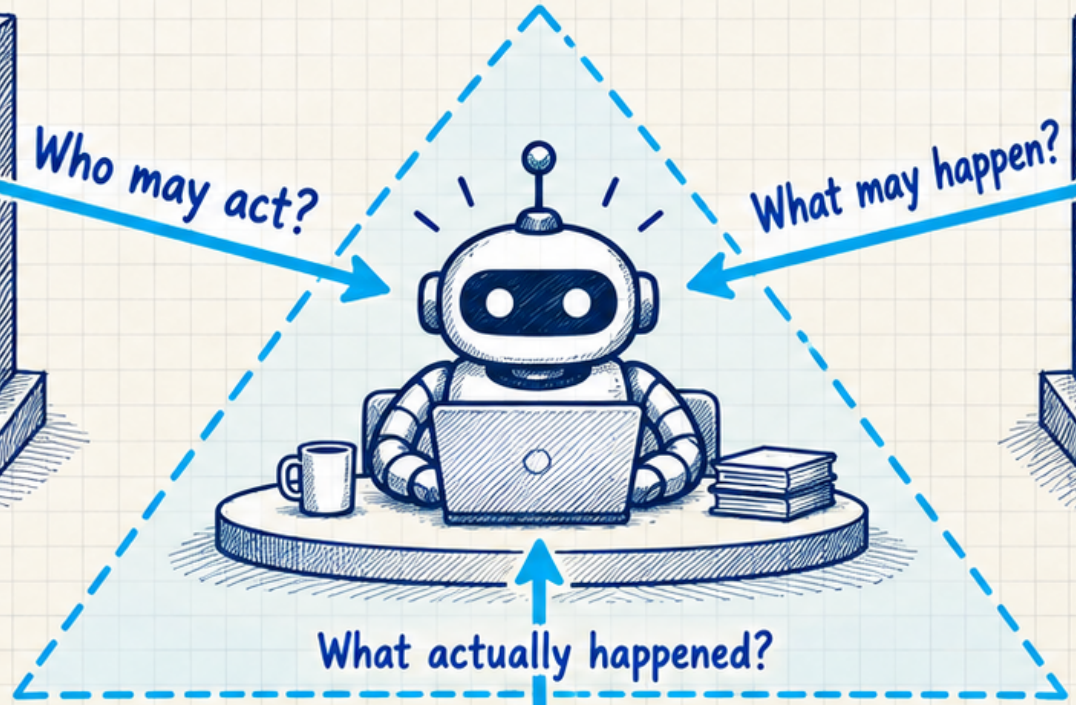
IDENTITY • BUILT

- Scoped non-human principals
- Per-consumer credentials

GAP: caller authentication

Who may act?

What may happen?



SECURITY • BUILT

- Tool classes + approval gates
- Admission + CI enforcement

What actually happened?

OBSERVABILITY • BUILT

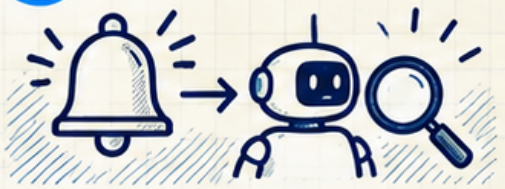
- Calls + approvals + traces
- Daily audit + risk triage

Argument redaction is best-effort.

Declared policy must meet runtime evidence.

EIGHT PATHS, ONE HONEST SCORECARD

01 DISPATCH



HYBRID | BUILT

NEW • READ-ONLY

Alerts → investigation; never a change

02 RETRIEVE CONTEXT

PROBABILISTIC | BUILT

Docs, memory, contracts

03 IMPLEMENT

PROBABILISTIC | PARTIAL

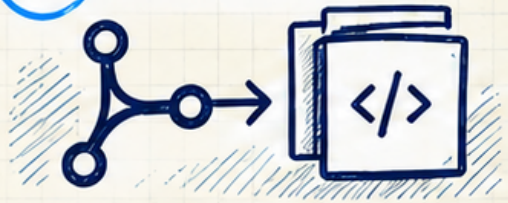
At the desk; no platform PR writer

04 VALIDATE

HYBRID | BUILT

Checks + drills; fixes when asked

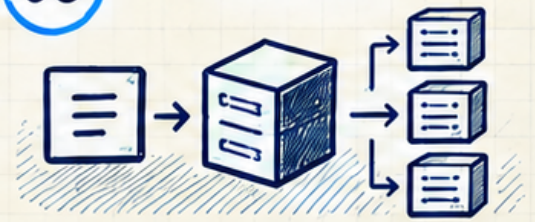
05 PROMOTE



HYBRID | BUILT

Policy for one class; human for the rest

06 DEPLOY



DETERMINISTIC | BUILT

GitOps reconciliation

07 OBSERVE

HYBRID | BUILT

Alerts trigger findings in chat

08 REMEDIATE

PROBABILISTIC | PARTIAL

Diagnosis arrives; fixes need a human

6 BUILT • 2 PARTIAL • 0 NOT YET

Investigation is automatic. Remediation is still gated.

HOW MUCH AUTONOMY EXISTS?

01 HUMAN IN THE LOOP

BUILT

Assistance on request.

02 HUMAN AS VALIDATOR

BUILT

Agents write; humans usually merge.

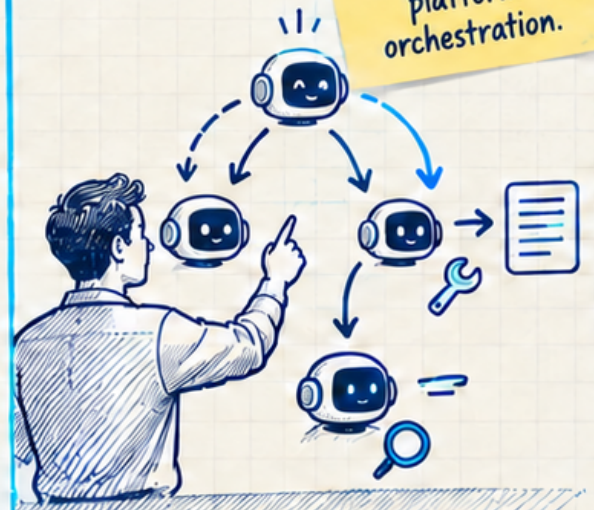
DAILY OPERATING MODE

03 HUMAN ORCHESTRATES

PARTIAL

Desk subagents + alert dispatch.

No agent-to-agent platform orchestration.



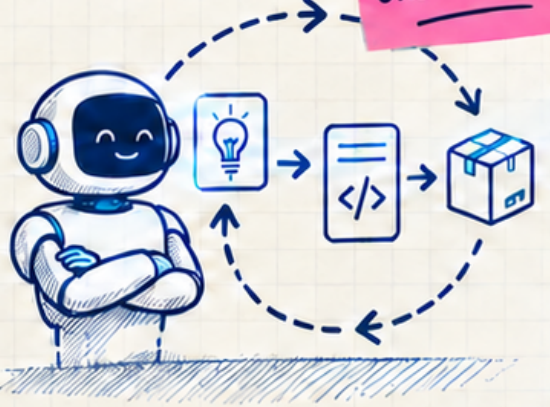
04 HUMAN OUT OF THE LOOP

NOT YET

GENERAL CASE

One declared exception: eligible dependency PRs merge + deploy by policy.

One class only



Maturity belongs to each path, not to a blanket platform claim.

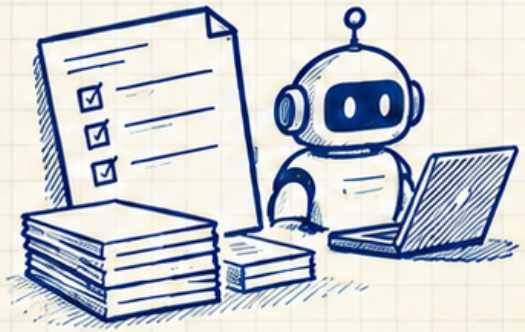
ONE RECORDED CHANGE

CLI approval flow • 12 OCT 2026

BEFORE

Human intent + agent implementation

9 files • +498 / −31 • 49 tests



PREPARATION

23 MINUTES: PR OPEN → MERGE

15:59Z • PR opened

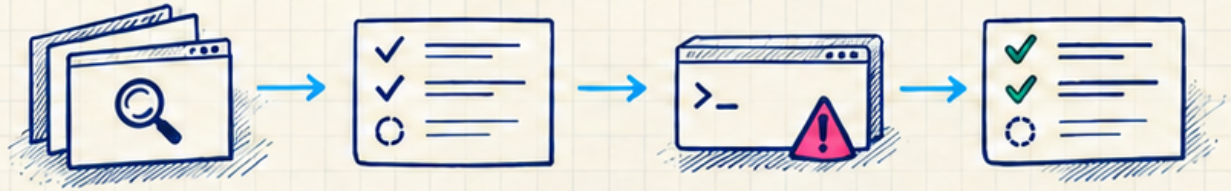
16:22Z • Human merge

Review classifier ran

27 check contexts • 4 skipped

Admission test timed out → human rerun passed

Admin override



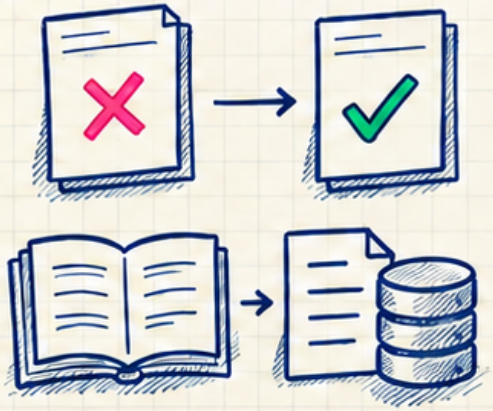
MEASURED WINDOW

AFTER

Reject: no change, no retry

Explicit request again → approve

Docs + memory updated



ACCEPTANCE

23 minutes excludes implementation and live acceptance.

A real delivery record, with human decisions still visible.

THE AUDIT THAT CHANGED THE CONTROLS

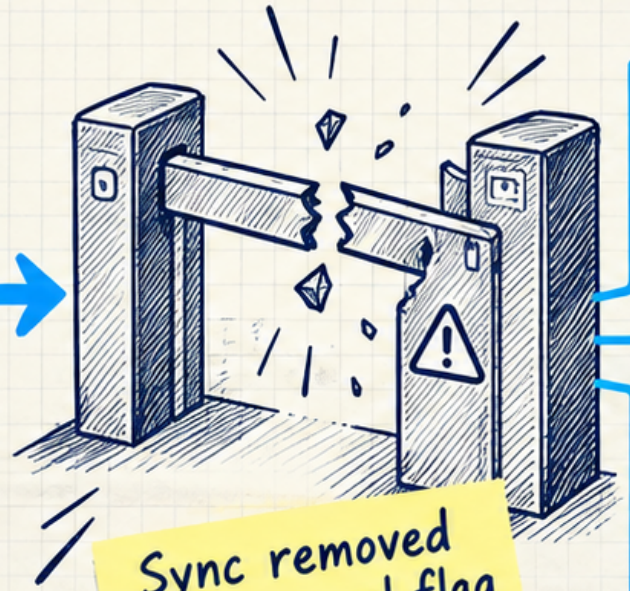
Historical finding • July 2026

GATED TOOLS ACTUALLY INVOKED

14
shell calls
09 JUL 2026

1
delete call
19 APR 2026

0
approval requests
Across the audited agent history



Sync removed the approval flag

RESPONSE: THREE CONTROLS

01 TAXONOMY BUILT
One classification source

02 ADMISSION + CI BUILT
Reject missing gates

03 DAILY AUDIT BUILT
Compare policy with calls

A declared gate needs runtime evidence.

Historical evidence, not a claim about current call counts.

CLOSE THE LOOP, IN ORDER

Dispatch is built; the remaining gates come next

01 EVALUATION AS A GATE — NOT YET

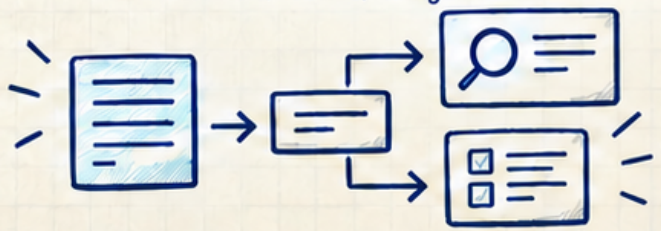
Turn on-demand evaluation into regression checks

02 CALLERS AS PRINCIPALS — NOT YET

Authenticate callers before multi-user access

03 DISPATCHER — BUILT • 12 OCT

Alerts → read-only investigation
Next; checks, issues, triage labels

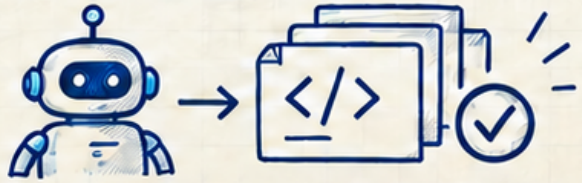


Identity next; dispatch built

Evaluation gate

04 IMPLEMENT IN THE PLATFORM — NOT YET

Agent PRs through checks + promotion policy



Prior gates required

05 REMEDIATE ON SIGNAL — NOT YET

Observation is built; proposed fixes remain gated

BUILT REUSE THE FOUNDATION — Secrets • Policy • Docs • Checks • Audit

Dispatcher never changes state or approves

Which path should earn the next level of autonomy?
